FOI_0805_2022-23 – FOI Request Concerning – Diabetes Systems

1. **What IT system(s) do your diabetes clinicians and specialists use to manage the interactions with and care of diabetes patients, both within the hospital and community settings?**

   As a community diabetes team, we use SystmOne to record our activity

2. **What IT system(s) do your diabetes clinicians and specialists use to view the full GP-owned medical records of diabetes patients?**

   Through SystmOne, we can view certain aspects of the GP medical record but not the entirety. We are also able to access CHIE which is a data repository previously known as the Hampshire Health Record.

3. **What IT system(s) or other methods do your diabetes clinicians and specialists use to update diabetes patients' GP-owned medical records?**

   Specialist teams do not currently enter data directly into GP records. Currently, information is shared via electronically transferred letters which are filed into the GP record and simultaneously filed on SystmOne.
